

CONSTRUCTION TECHNOLOGY

Program Description

The AAS in Construction Technology with an emphasis in Supervision is designed to prepare students for a wide range of opportunities in the construction field that require management skills. The curriculum incorporates courses in building materials and testing, estimating, planning and scheduling, project management, and other supervisory and essential learning courses that develop management skills.

Career options include obtaining a position as a purchasing manager, salesperson, crew supervisor, or project manager in the field of construction.

Students wishing to further their education with a four-year degree can do so seamlessly with a Bachelor of Science in Colorado Mesa University's Construction Management program.
