

FORENSIC SCIENCE

Program Description

Forensic science is a growing professional field throughout the United States. Forensic science is the interface between laboratory analytical science and the law. Students with a minor in forensic science can seek employment with Colorado Bureau of Investigation (CBI) and other employers conducting forensic investigations, or they may continue their education by seeking a master's degree in forensic science at another institution. The minor is best suited for students majoring in biology or chemistry. It will enhance students' skills in the molecular biology, analytical chemistry and criminologist techniques used in forensic investigations.
