

# RADIOLOGIC SCIENCES

---

## Program Descriptions

The Bachelor of Science in Radiologic Sciences (BSRS) program at Colorado Mesa University prepares individuals for certification and professional practice in the radiologic sciences. Radiologic technologists are an important part of the professional health care team, providing physicians with medical images that are vital for the diagnosis and treatment of injury, degeneration and disease. The BSRS program is accredited by the Joint Review Committee on Education in Radiologic Technology (JRCERT).

The four-year program provides educational experiences to prepare a professional radiologic technologist to practice in a variety of health care settings. After meeting the ethics, education and clinical competency requirements, graduates are eligible to take the certifying examination from the American Registry of Radiologic Technologists (ARRT). The program integrates theory, practice, and science with a broad liberal arts education. The program is designed to deliver quality education in both the classroom and clinical settings.

## Professional Certificates in Radiologic Sciences

The Radiologic Sciences program offers certified radiologic technologists with an associate or baccalaureate degree the opportunity for post-primary certification in computed tomography and a professional certificate in diagnostic medical sonography. After meeting the ethics, structured education, and clinical competency requirements, graduates are eligible to take the appropriate certifying examination from the American Registry of Radiologic Technologists. This can lead to greater employment opportunities, increased compensation, and job security.

## Special Requirements

Students applying for admission into the BSRS program must be admitted into the general University. Admission to Colorado Mesa University does not guarantee admission into the Radiologic Sciences program, which requires a separate application. Please contact the Health Sciences department for additional information.
